

Food Manufacture

# Goods In Department

## Lesson 5

Improve your knowledge of the goods in department in a food factory, focusing on key roles and actions within the department with this course.

Specifications for raw materials and primary packaging ensure compliance with safety and legislative requirements.

They are used as a guide to set out what is acceptable and what is not acceptable for specific attributes of raw materials and packaging.

They should include set limits for specific attributes of the material which may affect the quality or safety of the final product.

**Specifications  
should be  
reviewed every  
three years as a  
minimum.**

# Revision Activity 5

**What are goods in specifications used for?**
